Guidelines for Teaching Child Development, in Junior and Senior High School.
Washington State Div. of Vocational Education, Olympia. Home and Family Life Section.
Report No. HE-BULL-33
Pub Date 68

Note - 122p.

EDRS Price MF-\$0.50 HC-\$6.20

Descriptors - *Behavioral Objectives, Bibliographies, Child Care, *Child Development, *Curriculum Guides, *Family Relationship, High Schools, *Home Economics Education, Instructional Materials, Values

Curriculum materials developed through the cooperative efforts of the state supervisors, teacher-educators, homemaking teachers, and college child development specialists, are organized in terms of behavioral outcomes for the beginning, intermediate, and advanced levels, and contain generalizations with supporting content, suggested teaching plans, and reference lists. Subject matter areas are: (1) A Case for Teaching Child Development, (2) Values, (3) Development of Self, (4) Interpersonal Relationships, and (5) Family-Community Interaction. A color coded arrangement designates instructional level, behavioral outcomes and generalizations for the unit, teacher plan or references, information and the appendix. The appendix contains: (1) Guidelines for Organizing and Conducting a Play School, (2) Guidelines for Observations, (3) Suggestions for Developing a Unit on Babysitting, (4) Using Minute Dramas, Case Studies and Case Situations, (5) Creative Expression Materials, (6) Books, Pamphlets, and Bulletins, Periodicals, and (7) Films, Filmstrips, and Transparencies. (FP)

Instructions

The form on the reverse side is for the purpose of providing information on curriculum material submitted to the ERIC Clearinghouse on Vocational and Technical Education. The form, as submitted, will appear on microfiche with the publication and the ERIC Resume; thus, typing is necessary. Instructions for providing information on the form are explained below. Please provide as much information as possible.

The person, agency and address should be provided in the memorandum heading. A bibliographic citation for the material being submitted should also be given.

- (1) The name and address of the source where materials may be ordered should be included, regardless of authorship of the material. Limitations on the availability of copies should be listed, as well as the price per unit and quantity prices. If source does not wish to service orders for this material, please mark ERIC Only in the space designated for Agency.

- (2) Means used to develop material should include:

Development Group -- the individual or group principally responsible for the material's development. (e.g., individual authorship; development committee of teachers, supervisors, teacher educators; R & D project)
 Level of Group -- level of the group which developed the material. (e.g., local, state, regional, national) In the case of individuals, list their titles.
 Method of Design, Testing, and Trial -- methods used in designing, testing, and trying the material prior to its final publication. (e.g., designed by subject matter specialists and teacher educators from the results of industry survey, tested on a small group, refined, and pilot tested in ten schools)

- (3) Utilization information should include:

Appropriate School Setting -- the type of school for which the material was designed. (e.g., community college, technical institute, area vocational high school)
 Type of Program -- the nature of the educational program for which the material was designed. (e.g., high school class, rehabilitation, retraining)
 Occupational Focus -- the occupational focus to which the material is directed, whether a specific job or an occupational cluster.
 Geographic Adaptability -- the limitations of the material related to geographical regions. (e.g., Southeastern United States, Western United States, Minnesota, etc.)
 Uses of Material -- the specific uses for which the material was designed. (e.g., course planning, lesson planning, student reading)
 Users of Material -- the person for whom the material was designed. (e.g., teacher, student)

- (4) Requirement information should include:

Teacher Competency -- the subject matter specialization, level of training and experience required of the teacher in order to use the material.
 Student Selection Criteria -- the age, sex, grade level, aptitude, prerequisite training, and employment goals of the students.
 Time Allotment -- the amount of time required for use of the material in total clock hours.
 Supplemental Media -- the media, either necessary or desirable, which is available for use with the material. Please list the source, including name and address, where the material may be obtained.

- (5) Please list other information on a separate sheet. This might include unique aspects of the material not provided for in other categories on the form.

FOREWORD

Curriculum study in Child Development was initiated by the Home and Family Education Teachers' Coordinating Council at the 1965 annual inservice education conference. Miss Bethine Bigej, Director, Nursery School and Associate Professor of Child Development, Montana State University, set the stage for individual and area group work by assisting teachers with identifying appropriate concepts and subject matter; and with methods of teaching.

Study was continued in area teacher groups and in college summer session courses. At a one-week workshop held in June, 1967, representatives from the sixteen area groups arranged these guidelines.

Suggested teaching plans and/or resource units have been provided for each generalization to illustrate how the content can be structured to provide learning experiences. Each teacher's teaching plans will vary, depending upon the resources available, and the needs of students and their families.

Marianne Andrews, Director
Home and Family Life Education

A CASE FOR TEACHING CHILD DEVELOPMENT

Forces in Society that Affect Children	Effect of These Forces on Families and Children	Some Implications for Teaching Child Development
Families on the move.	Families lose contact with family and friends.	Help students understand that the influence on the development of a child on non-family members may be greater than that of family members, due to mobility.
Medical advances.	Decreased infant and maternal mortality.	Help students understand that adequate prenatal and post-natal care helps to assure health of the mother during and following pregnancy and increases the probability of having healthy children.
Rapid accumulation of medical and social research.	Greater opportunities for handicapped to function.	Help students become aware of resources available to allow the handicapped to develop to their fullest potential.
	Lag between research and practice in care for mothers and babies, and child rearing practices.	Help students interpret data on medical advances as it relates to birth control, pregnancy, nutrition, childhood diseases and immunization.

A CASE FOR TEACHING CHILD DEVELOPMENT
(continued)

Forces in Society that Affect Children	Effect of these Forces on Families and Children	Some Implications for Teaching Child Development
Advances in Technology.	Radio - Television around the world. Phones in Common Use. Printed Materials. More hazards in modern homes and community.	Help students recognize the positive and negative role the mass communication system may have on a child's development. Help students identify potential hazards to children in the home and community and work with com- munity services toward prevention.
More Working Mothers.	Increased need for parent substitutes. Changes in the roles of men and women.	Help students develop criteria for selecting day care facilities and/or substitute parents. Help students understand that changes in our society have placed different emphasis on the roles and responsibilities of family members.
Selective Service.	More fathers absent from home -- uncertain return.	Help students recognize the adaptations needed for nur- turing of children when the family is disrupted by military obligations.

Shifts in social attitudes

Teenage marriages

Help students understand that health practices during adolescence may affect one's ability to have healthy children.

Trend toward more early childhood education.

Help students to become aware of the influence of early experiences in the development of intellectual skills as well as helping them to see that parents are in a position of providing the "head start."

Community agencies have increasing responsibility for child development and care.

Help students become aware of community resources related to child welfare, health and education.

WASHINGTON HOME AND FAMILY LIFE TEACHERS BELIEVE THAT:

Students need guidance in learning about the growth, development and behavior of children.

Child guidance is a family function; however, the school and community have a responsibility of educating both boys and girls for parenthood.

The approach for teaching child development must be based on a deep sense of respect for each human being.

Through understanding children, students may be helped toward self understanding.

Actual contact with children is essential as a means of making this area of study meaningful to students.

Teachers need to help students develop insight and understandings rather than merely amass specific facts.

KEY TO USING THE GUIDELINES

These guidelines are built around a framework of Behavioral Outcomes at the Beginning, Intermediate, and Advanced Levels. Generalizations with supporting content have been identified for each Behavioral Outcome. Suggested teaching plans, and/or resource sheets of references for developing teaching plans, have been provided for all generalizations.

COLOR CODE:	White	-	General Information
	Buff	-	Summary of Behavioral Outcomes and Generalizations
	Green	-	Beginning Level
	Pink	-	Intermediate Level
	Yellow	-	Advanced Level
	Blue	-	Appendix

SYMBOLS:

- (P) on summary sheet - Suggested teaching plan included.
- (R) on summary sheet - Suggested resources for developing a teaching plan.
- (number) - Indicates pamphlet or bulletin. Sources listed in appendix.
- (letter) - Indicates film, filmstrips, or transparencies. Sources listed in appendix.

90-91

Area of Concentration DEVELOPMENT OF SELF

Learning Level BEGINNING

Behavioral Outcome The student will be better able to UNDERSTAND THAT EACH INDIVIDUAL DIFFERS IN HIS POTENTIALITIES, INTERESTS, AND ABILITIES.

GENERALIZATION(S) WITH CONTENT

LEARNING EXPERIENCES
(INCLUDING EVALUATION)

RESOURCES FOR LEARNING

A child's heredity may determine the capacity within which he can develop; environment influences the development that actually takes place.

Bring a baby picture of yourself and one of your parents (as a child or recent picture). Place on bulletin board under "Children," "Parents." Use a caption such as Who's Related to Whom?

Your Children's Heredity, (23).

Building Self-Confidence in Children, (23).

Content:

In groups, match child pictures with parent pictures. Explain why you paired them.

Dictionary

Inherited traits, i.e., physical traits, capacity to learn.

Write out definition for the following terms:
inherited
environment
genes

Smart and Smart, Living in Families, pp. 33-40, 50-54, 66-71.

Environmental factors, i.e., family culture, peers, community, school.

Baker and Fane, Understanding and Guiding Young Children, pp. 13-18.

Read references on heredity and environment, (Baker and Fane 13-18). Discuss why children are different. Discuss how environment may influence one's development.

Hurlock, Child Growth and Development, pp. 24-33.

Kawin, Basic Concepts for Parents, pp. 17, 27, 147, (Teacher Reference).

Discussion: Refer to pictures -- why did you pair them?

In what other ways are you like your parents? (friendliness, temperament, quietness, etc.)

Brisbane and Riker, The Developing Child.

What characteristics are inherited or learned?

Area of Concentration	DEVELOPMENT OF SELF
Learning Level	BEGINNING
Behavioral Outcome	The student will be better able to UNDERSTAND THAT EACH INDIVIDUAL DIFFERS IN HIS POTENTIALITIES, INTERESTS, AND ABILITIES. (continued)

GENERALIZATION(S) WITH CONTENT	LEARNING EXPERIENCES (INCLUDING EVALUATION)	RESOURCES FOR LEARNING
--------------------------------	--	------------------------

(continued from preceding page)

List all characteristics on the chalk board under titles "Inherited Characteristics" and "Environmental Influences." (Use \longleftrightarrow for characteristics influenced by both.)

Find a newspaper clipping on children or teenagers who have won an award, have excelled, or have been brought before court. Debate or discuss influential forces that may have led to circumstances related in the article.

Write on: Some Talents I have and Some Things I'd Like to Do Better. Identify reasons why you may have these talents -- or lack of talents.

Read case histories of the Brown, Johnson, and James Families: If you were a member of each family, what plan for reaching goals for the 4 children would you help form? By committees, evaluate plans.

Make a statement that expresses your understanding of the relationship of heredity and environment to the development of an individual.

Examples of case histories:

1. The Brown family has a four year old boy, Tony. Mr. Brown is eager to have him excel in athletics, particularly football, as he was a fullback at Washington State University.
2. Linda Johnson is three. She is the baby of the family. She has two older brothers. The boys and dad are outdoor enthusiasts; they fish, hunt, and hike.
Mrs. Johnson participates in all of these activities -- but her special interests are art and music. She would like Linda to be a musician.
3. The James family have twins, Jody and Jim, who are five. Dr. James would like both children to have an education in medicine.

Area of Concentration DEVELOPMENT OF SELF

(next page)</p>

BASIC NEEDS OF YOUNG CHILDREN

If I were a Child:

1. I should like to play in safe and sheltered places.
2. I should like to play with clay.
3. I should like to play with sand.
4. I should like to play with paint.
5. I should like to play with water.
6. I should like to make music.
7. I should like to laugh.
8. I should like to occasionally use my fingers, too.
9. I should like a quiet place where I could sleep.
10. I should like a quiet place just to rest.
11. House furnishings would be adjusted to fit my size.
12. I should like to play with others my age.
13. I should like to learn for myself that other people live and have feelings too.
14. Sometimes it would be nice just to be alone by myself.
15. I should like to know friendly grown-ups.
16. I should like to have loving parents.
17. Oh, yes, I should like to learn to eat at my own speed.

Area of Concentration DEVELOPMENT OF SELF

Learning Level BEGINNING or INTERMEDIATE

Behavioral Outcome The student will be better able to IDENTIFY AND ANALYZE PHYSICAL, EMOTIONAL, SOCIAL, AND INTELLECTUAL GROWTH PATTERNS OF INDIVIDUALS AND HOW THEY AFFECT BEHAVIOR.

GENERALIZATION(S) WITH CONTENT LEARNING EXPERIENCES
(INCLUDING EVALUATION)

RESOURCES FOR LEARNING

There is a universal and irreversible pattern of human development which is continuous and proceeds in an orderly sequence and each individual is unique in his rate of development.

Read about physical development.

Observe children in the neighborhood, in a play school or at home--infants to 6 years of age. Look for physical development (such as structure, height, proportions, and muscular coordination).

Shuey, Woods, and Young, Learning About Children, pp. 94-95.

Brisbane and Riker, The Developing Child, pp. 84-87, 171-174, 262-264, 270.

Content:

Characteristics of children at various stages and ages:

Discuss observations in light of how each child develops in a different way.

Your Child from One to Six, (24).

Read "What George Did" in Living and Learning with Children. Identify stages of George's physical development as revealed in the story with that of children you know of the same and of different ages.

Gardner, Development in Early Childhood, The Preschool Years, pp. 212-245, (Teacher Reference).

Patterns of Development

continuous
orderly
general and specific, e.g.,
large motor skills to
small motor skills,
simple to complex

Think of a physical skill that you learned recently, (such as skiing, tennis, driving, a new dance step). In what ways were you like George who is learning to walk? Compare length of time it took to develop your skill as compared to one of your friends.

Smart and Smart, Living and Learning with Children, pp. 122-126.

Hatcher and Andrews, Adventures in Home Living, pp. 453-454.

Unique Rate of Development

Cite an example of a child who seems fast or slow in his physical development.

Taking Care of a Pre-School Child, (28).

Area of Concentration	DEVELOPMENT OF SELF	GENERALIZATION(S) WITH CONTENT	LEARNING EXPERIENCES (INCLUDING EVALUATION)	RESOURCES FOR LEARNING
Learning Level	BEGINNING or INTERMEDIATE	Behavioral Outcome	(continued from preceding page)	Brisbane and Riker, <u>The Developing Child</u> , pictures throughout the book. Dittoed charts for students, "A Word Picture of Preschool Children." (at end of plan)
The student will be better able to IDENTIFY AND ANALYZE PHYSICAL, EMOTIONAL, SOCIAL, AND INTELLECTUAL GROWTH PATTERNS OF INDIVIDUALS AND HOW THEY AFFECT BEHAVIOR. (continued)			Look at pictures of children of different ages which show them in physical activity. Evaluate for stages of growth. On a chart, "A Word Picture of Preschool Children," record growth patterns. Read about social development of the young child. Define what is meant by social development.	
Observe Film.	Record ways in which children are playing.	Identify social growth patterns revealed in the film.		Craig, <u>Thresholds to Adult Living</u> , pp. 261-274.
				Shuey, Woods, and Young, <u>Learning About Children</u> , pp. 142-149.

Your Child from One to Six, (24).

"Meeting Emotional Needs in Childhood," (K).

"Children's Emotions," (K).

Preschool Guide, (7).

View film, "Meeting Emotional Needs in Childhood," or "Children's Emotions."

Write a paragraph showing how children express the following emotions in the film: anger, curiosity, joy, fear, hate, jealousy.

Identify emotional growth patterns revealed in the film. On the chart, "A Word Picture of Preschool Children," record emotional growth patterns.

Area of Concentration	DEVELOPMENT OF SELF	
Learning Level	BEGINNING or INTERMEDIATE	
Behavioral Outcome	The student will be better able to IDENTIFY AND ANALYZE PHYSICAL, EMOTIONAL, SOCIAL, AND INTELLECTUAL GROWTH PATTERNS OF INDIVIDUALS AND HOW THEY AFFECT BEHAVIOR. (continued)	
GENERALIZATION(S) WITH CONTENT	LEARNING EXPERIENCES (INCLUDING EVALUATION)	RESOURCES FOR LEARNING
(continued from preceding page)	Read about intellectual development.	Gardner, <u>Development in Early Childhood, The Preschool Years</u> , pp. 194-223, (Teacher Reference).
	Define intelligence and intellectual development. Give examples of ways children show a stage of intellectual development (memory, attention span, problem solving ability, degree of verbalization).	Brisbane and Riker, <u>The Developing Child</u> , pp. 151-164, 229-245, 307-315, 382-396.
	Observe children to note how a stage of intellectual development is revealed by children of specific ages.	Children at home, in play school, or nursery school.
	Identify growth patterns in intellectual development.	
	Record intellectual growth patterns on chart.	
	View film, "Terrible Twos and Trusting Threes," and/or "Frustrating Fours and Fascinating Fives," or "Long Time to Grow." Discuss examples in the film(s) which illustrate social, emotional, intellectual, and/or physical development.	"Terrible Twos and Trusting Threes," (K). "Frustrating Fours and Fascinating Fives," (K). "Long Time to Grow," (J).

Read case situations such as "Young Children at Play," and "What George Did," in Living and Learning with Children. Analyze what children did according to stage of growth. Tell how individual differences in children are illustrated by how they react to similar situations, i.e., receipt of a gift, demonstration of affection, scolding, etc.

Smart and Smart, Living and Learning with Children, pp. 122-124, 130-144.

Plan for students to observe young children at home or in the community and to note examples of social, emotional, intellectual, or physical development.

Divide girls into groups according to the age of children they observed. Have each group discuss their respective observations and compile a list of similar characteristics for each age group. Have each group present a panel discussion of their observations. Begin with the group who observed the youngest and proceed to the oldest.

Role play showing five to eight year olds at play. Discuss how this play shows physical, social, emotional, and intellectual development.

Smart and Smart, Living and Learning with Children, pp. 146-154.

Summarize information by means of pictures which show stages of development of children 1 to 6 years of age (physical, emotional, social, and intellectual).

A WORD PICTURE OF PRESCHOOL CHILDREN

	Two Year Old	Three Year Old	Four Year Old	Five Year Old

 AND INTELLECTUAL DEVELOPMENT.

RESOURCES FOR LEARNING

GENERALIZATION(S) WITH CONTENT LEARNING EXPERIENCES (INCLUDING EVALUATION)

When an individual experiences satisfaction from the results of a particular pattern of behavior, he is likely to incorporate that pattern into his behavior.	Read references on development of behavior patterns. Record the "big ideas." Discuss the "big ideas."	Brisbane and Riker, <u>The Developing Child</u> , pp. 243-245. Baker and Fane, <u>Understanding and Guiding Young Children</u> , Chapter 5, pp. 153-157.
Content: Elements of satisfactory experiences making desirable behavior interesting positive reinforcement developing self-confidence	Describe experiences you have had or things people have said to you which influenced the way you behaved. Analyze your experiences and identify positive approaches and negative approaches. Examine why the behavior was interesting and enjoyable.	Landis and Landis, <u>Personal Adjustment, Marriage, and Family Living</u> , pp. 323-330. Good Ways to Guide Your Child's Behavior, (11).
	Read short case situations involving children's behavior and propose a solution using a positive approach. (See Baker and Fane, pp. 153-157, and <u>Child Guidance Techniques</u> , pp. 11-13.)	<u>Child Guidance Techniques</u> , (27).

Evaluate the approaches you have suggested in terms of the big ideas discussed in class and how the child might incorporate the experience into the way he behaves.

Behavioral Outcome The student will be better able to GUIDE THE CHILD IN PHYSICAL, EMOTIONAL, SOCIAL, AND INTELLECTUAL DEVELOPMENT.

GENERALIZATION(S) WITH CONTENT

LEARNING EXPERIENCES
(INCLUDING EVALUATION)

RESOURCES FOR LEARNING

Each child responds in terms of what he understands and how he interprets his previous experiences.

Watch children in a situation such as: group play -- play school, kindergarten, nursery with mother as she performs household tasks.

Content:

Record directions you hear given the child and note his reaction.

Ways children learn to understand.

Smart and Smart, Living and Learning with Children, pp. 182-230.

Types of responses - ways of responding:

Discuss case studies using these questions:

What did the child do?

What did the child say?

How was the child responding?

anger

frustration

affection

fear

cooperation

withdrawal

Recall similar personal experiences in play or mother-child household situations.

Value of reinforcement

Read references on how children learn through activities.

Smart and Smart, Living and Learning with Children, pp. 86-98.

Choice of experiences

Identify how the adults you have observed and have read about help children as they learn.

Baker and Fane, Understanding and Guiding Young Children, pp. 161-204.

Through use of play materials a child can develop his imagination, as well as develop social skills and attitudes.

Read several references from the books listed.
Define and give examples of the following types of play: creative, dramatic, social.

Smart and Smart, Living and Learning with Children.

Fleck, Fernandez, and Munves, Living with Your Family, pp. 217-218.

Groups prepare demonstrations to show types of play materials which might be used in the various areas.

Fleck, Fernandez, and Munves, Exploring Home and Family Living, pp. 256-266.

Play equipment and materials kinds uses selection presentation

Discuss how the play materials could be used.

Barclay and Champion, Teen Guide to Homemaking, pp. 406-410.

Analyze role of each type of play in developing imagination, social skills, and attitudes.

Brisbane and Riker, The Developing Child, pp. 179, 225, 245, 247, 331.

Observe children in one of the following situations and report on how they respond:
Playing with large blocks and boxes.
Playing with a doll.
Playing with old clothes.

Play, Children's Business, (4)

Singing a song or playing rhythmic games.
Finger painting.

Pitcher, Lasher, Feinburg, and Hammond, Helping Young Children Learn.

Compare differences and similarities on how children used the materials.

Each group set up criteria for selection of the type of play material they demonstrated.

Attitudes toward food may be dependent upon family food patterns and how food is prepared and served.

From a list of foods, check the ones you like; dislike; have not eaten. Discuss why foods are liked or disliked.

Feeding Little Folks, (15).

"Food as Children See It," (C).

Content:

In buzz groups compile descriptions of how attitudes of family members have affected group members' attitude toward food.

Foods Your Children Need, (24).

Conditions which encourage eating:
Atmosphere at mealtime.

Preparation and service of food.

Report back to class.

Attitudes of family members toward food.

Describe different family food patterns. Note the various patterns within the community.

Baker and Fane, Understanding and Guiding Young Children, pp. 83-85, 111-112.
Brisbane and Riker, The Developing Child, pp. 187-191.

Family food patterns.

Describe parts of your diet that may have been affected by family food patterns.

Compile suggestions for helping a child learn to help himself while eating.

Compile suggestions for introducing new foods to a child.

Observe a child while eating. Note age, how much he eats, the extent to which he helps himself.

Report to class.

Discuss case studies concerning growth and development, (see teacher reference). Identify the major development taking place in each study.

Relate principles of growth to growth of friends and of self.

Compare the behavior one year ago to behavior today of a brother or sister, or a child for whom you babysit and write an evaluation of the differences based on the information learned in class.

Area of Concentration	DEVELOPMENT OF SELF
Learning Level	ADVANCED
Behavioral Outcome	The student will be better able to IDENTIFY AND ANALYZE PHYSICAL, EMOTIONAL, SOCIAL, AND INTELLECTUAL GROWTH PATTERNS OF INDIVIDUALS AND HOW THEY AFFECT BEHAVIOR.

GENERALIZATION(S) WITH CONTENT	LEARNING EXPERIENCES (INCLUDING EVALUATION)	RESOURCES FOR LEARNING
--------------------------------	--	------------------------

The human organism has a great capacity for physical, emotional and social self-repair.

Look at bulletin board and discuss what it means. (See example at end of this plan.)

Review the emotional and social growth patterns of the young child. List on flip chart the emotional and social characteristics of young children.

Brisbane and Riker, The Developing Child, Chapters 5, 8, 11, 14.

Content:

Tensional Outlets
thumb sucking
temper
masturbation
stuttering

Hymes, The Child Under Six, (Teacher Reference)

Ilg and Ames, Child Behavior, Chapter 7.

Adaptive mechanisms
direct attack
rationalization
regression
withdrawal
compensation
projection
daydream

Shuey, Woods, and Young, Learning About Children.

Some Special Problems of Children, Age 2 to 5, (6).

Discuss and interpret the following statement:
"Children, as well as adults, feel at times certain normal tensions. Tensional outlets are devices which help the child live with his tensions - rather than problems that must be cured."

Read about the following tensional outlets:
thumb sucking
temper tantrums
masturbation
stuttering

Interview a pediatrician to find out how the above tension relievers help children cope with tension producing situations. Report findings to class.

What did the adult do in the situation cited in Smart and Smart that would help or hinder the children in repairing their relationships.

Divide the class in small groups; have each group role play a situation showing one of the following types of adaptive mechanisms used by young children:

- rationalization
- direct attack
- regression
- withdrawal
- compensation
- projection
- daydream

Examine the role playing situations in terms of the behavior shown that would help the child to adapt to the situation.

Observe children (kindergarten, nursery school, playgrounds, grocery store, etc.) to find examples of how children may be using adaptive mechanisms or tension relievers.

Describe the situations. How long did the child show this type of behavior? If there was an adult present, what did he do? Report findings.

Draw conclusions about the human being's natural ability for emotional and social adaptation to the environment. Write a paper to support these conclusions.

Smart and Smart, Living and Learning With Children, pp. 183-184.

The Play School

A Play School is held primarily for the purpose of giving home economics students an opportunity to observe young children at play as well as to apply principles of growth and development that have been studied in class. Provision must be made for students to have experiences with children which are directly related to identified objectives and generalizations of the child development unit. Learning experiences prior to and during the play school should help students to identify equipment needed, criteria for observation, criteria for selecting and presenting materials and equipment, and keys for guiding children's behavior.

Early Steps

Secure the approval and cooperation of the school administration.

Be on the alert for children who might be enrolled. Home visits make an excellent opportunity for her to meet the children in their own homes and to discuss them with the mothers.

Help girls set criteria for choosing the children to be enrolled. Some guides for selection would include:

Ages of children -- usually children of $3\frac{1}{2}$ to 5 are most satisfactory for giving the girls the needed experiences. The child who is under $3\frac{1}{2}$ may need too much attention; the child who is over 5 will be a little advanced for some of the activities the play school may offer. If characteristics of certain age children are to be studied, more than one child of similar ages should be a part of the group. A narrow span of ages may simplify planning as well as executing the play school. An equal number of boys and girls offers a chance to observe differences between boys and girls.

Children who are used to being in groups, e.g., Sunday school or neighborhood groups.

Children who are not too shy to adjust readily to new situations, new adults and high school girls.

Children who will be able to attend every day the school is in session.

Children whose parents can bring them and call for them.

The number of children who can be handled successfully will vary with the size of the class and the size of the room, but will usually not exceed eight or ten children.

After the criteria have been set up, the girls may suggest names of children who meet the qualifications.

Working with Parents of Preschool Children

The teacher may send letters to the mothers of the children, or she may call on them. In any event, it is helpful to call the mothers and girls together for a meeting to discuss the play school purposes and program. This gives an opportunity to clear up any questions which the mothers may have.

The mothers may be asked for suggestions for equipment. A film on children's play may be shown. Many times mothers are willing to lend or donate play equipment.

If the teacher feels it desirable, she may ask one of the mothers with previous experience in handling groups of children, to help, at least for a day or two.

A letter to the parents could include:

Purposes of the play school

Dates and time schedule

Suggestion of appropriate clothing

Statement of parents' responsibility in getting his child to and from school

Considerations on Time

The length of the time for play school varies in specific situations. It can be held for one to three or four weeks -- and usually not longer than three hours for a session to avoid tiring the children. Meeting every day has a disadvantage because the students do not have class periods to discuss their observations in a class group or to plan for future experiences for the children. Another plan, found successful by some teachers, is to have the group meet every other day. In this way, the class has days in between to identify their learnings and to plan for future activities. A third plan is for the play group to be in session consecutive days -- as: Tuesday, Wednesday, and Thursday -- with time for planning and discussion (without children present) on Monday and Friday.

Participation of Homemaking Students

Planning for the play school --

Students have the opportunity to discuss, answer or solve questions in relation to:

- When the children should come to school
- Enlisting the cooperation of children's parents
- What the children will do at the play school
- The types of equipment and materials needed
 - and methods of obtaining them
- Guides for observing children and their activities
- Room arrangements
- Schedule of activities and duties of classmembers

Organizing the environment for play needs:

- After making plans for equipment, materials and room arrangements, the students may participate by:
 - Constructing and improvising safe, inexpensive equipment
 - Collecting first-aid materials
 - Setting up the room

Assisting in guiding the children --

- Students may have experiences with the children by:
 - Assisting with routine of serving snacks, toileting, hand washing
 - Reading stories
 - Setting out play equipment and materials
 - Assisting with play
 - Being alert to safety situations
 - Helping children resolve conflicts

Observing

Students may learn about children by observing the children in specific activities and/or for specific characteristics. The play school schedule should allow time for students to make several different observations and to analyze their observations as a group. This may be used as partial data for forming generalizations. (See page 99 for Guidelines for Observations)

Selection of Equipment and Learning Materials

Play equipment and materials for a play school need not be expensive.

They may be very simple, but should be chosen to meet the developmental needs of the children. Many things for the play school could be made by the homemaking students.

The equipment for the play school might include such items as: books, peg boards, puzzles, beads to string, clay, equipment for finger painting, work bench with tools, housekeeping corner, clothes for dressing up, large and small blocks, balls, suggies, wagons, brooms, stick horses, sand box equipped with pots, pans, spoons, boxes.

The Play-School Schedule

The daily schedule for a play school may be planned by the homemaking students after they have determined the possible experiences to be included. The scheduled activities will give students the opportunity to observe children in a variety of activities as well as actual experience of guiding children in various situations. The schedule might include opportunities for the students to observe and work in situations, such as greeting children and their parents, free play, news circle, story hour, finger games, and snack time.

Student committees generally plan for the activities. Responsibility for guiding children in the activities should be rotated in order to give each student as many different experiences with the children as possible.

Use a play school to teach to the objectives and generalizations in the concept area -- Development of Self.

GUIDELINES FOR OBSERVATIONS

The observation of children in a variety of activities and situations may be a valuable tool for teaching the developmental processes of growth. In order to assure the suitability of observations and observation devices to the particular needs of a group of students, students and teachers should plan the major goals to be achieved through the observation of children.

Types

A formal observation is a written record dealing with and limited to a specific child, characteristic, or activity. Typical observations might include the study of a child's physical, social, emotional, or intellectual development; how children use materials; or how children participate in activities such as playing house, listening to a story or playing a game. This type of observation is related to an identified objective determined by students and teacher, and is carried out as an assigned part of a student's classwork in learning about children.

An informal observation is an observation by a student of behavior of a child or children not related to a specific objective or assigned formal observation. This would include unplanned observations of children in any structured situation, as in a Sunday school, or unstructured, as in a barber shop or neighbor's backyard. Students will need an opportunity to discuss these casual observations and interest generated as a result may be used to develop the objective for a specific formal observation.

Controls

For students at the high school level, an observation should be planned with some specific objectives and controls. An observation may be controlled by a time limit or the number of children to be watched or a limit may be placed on the activity area or specific characteristic to be observed.

Devices

As students and teachers develop observation devices they will need to:

- establish the major goal to be achieved through each observation.
- recognize the level and experience of students involved.
- select characteristics in which students are interested and are found frequently in children of the ages being observed.
- limit each observation to a few specific characteristics.

- plan several different observations.
- plan for observation of more than one child by each student.
- design a method of differentiating between fact and opinion.
- plan a device easily used by the student within the defined controls.

Sources

Children may be observed formally and informally in many structured and unstructured settings both in the classroom and beyond the school. Students and the teacher should work together to identify types of observation and device forms which would be most suited to a given situation and would achieve the planned objectives.

Some suggested sources are:

Playgrounds	Restaurants
Elementary schools - kindergarten	Shoe stores
and first grade	Beauty shops - Barber shops
Well-baby clinics (with doctor's	Parks, Zoos, Public pool, Library
permission)	Neighborhood yards
Supermarkets	Ball games

Evaluations

Students should have the opportunity to discuss their observations as they complete them. Working as a group and sharing their observations, the students may compile a broad picture of several children. A discussion of how the students interpret what they have seen may help develop an understanding of a child's developmental processes and of the students feelings about children.

SUGGESTIONS FOR DEVELOPING A UNIT ON BABYSITTING

A special unit related specifically to those skills needed in "babysitting" may be developed through learning experiences related to several beginning level generalizations. Knowledges and skills needed by boys and girls who have children temporarily in their care should be identified by the students and the teacher with the assistance of parent and community sources.

The following behavioral outcomes, generalizations, and references are suggested for content and objectives in preparing a teaching plan on babysitting.

Behavioral Outcomes and Generalizations

DEVELOPMENT OF SELF

The student will be better able to IDENTIFY AND ANALYZE PHYSICAL, EMOTIONAL, SOCIAL, AND INTELLECTUAL GROWTH PATTERNS OF INDIVIDUALS AND HOW THEY AFFECT BEHAVIOR.

To the extent that an individual's needs are met as they occur, he is free to develop toward his full potential.

There is a universal and irreversible pattern of human development which is continuous and proceeds in an orderly sequence and each individual is unique in his rate of development.

Social development results from a continuous interaction of the individual and his widening environment.

The student will be better able to GUIDE THE CHILD IN PHYSICAL, EMOTIONAL, SOCIAL, AND INTELLECTUAL DEVELOPMENT.

There are different types and techniques of guidance.

When an individual experiences satisfaction from the results of a particular pattern of behavior, he is likely to incorporate that pattern into his behavior.

Each child responds in terms of what he understands and how he interprets his previous experiences.

A child learns roles, attitudes, and values by imitating (modeling) those around him.

An environment which provides sensory and motor activities promotes intellectual development.

Through use of play materials a child can develop his imagination, as well as develop social skills and attitudes.

Play aids in development of motor skills and coordination.

Attitudes toward food may be dependent upon family food patterns and how food is prepared and served.

Adequate physical care contributes to the well-being of children.

INTERPERSONAL RELATIONSHIPS

The student will be better able to ACCEPT, ENJOY, AND BE INTERESTED IN CHILDREN (INCLUDING BROTHERS AND SISTERS).

Each individual family member affects and is affected by his family.

USING MINUTE DRAMAS, CASE STUDIES, AND CASE SITUATIONS

IN TEACHING CHILD DEVELOPMENT

It is possible for students to learn about children through use of minute dramas, case situations, and case studies. These situations can be role played and/or used for analysis and problem solving. The following references contain case situations which may be appropriate for teaching to specific generalizations:

Bradbury and Amidon, Learning to Care for Children, (don't be misled by 1943 publishing date).

Brisbane and Riker, The Developing Child.

Brown and Plihal, Evaluation Materials for Use in Teaching Child Development.

Smart and Smart, Living and Learning With Children.

When Teenagers Take Care of Children, (24).

CREATIVE EXPRESSION MATERIALS

Easel Painting

Usable powder paints are:

1. Fuller Poster and Fresco Paint
2. Sherwin-Williams Art Colors
3. Free-Expression Paints
4. Muralo Art Colors
5. Devoe Dry Colors

May be bought at paint stores or school supply houses.

Method: Add water slowly to paint, stirring constantly. Red and orange mix better if warm water is used. Use of an egg beater or a shaker is also helpful. Be sure the color is thoroughly mixed and saturated. The paint should be bright and rather thick in consistency.

Paint can be mixed in quantity and kept for a week or more, if stored in a comparatively cool place (in screw top containers). It settles into the bottom of jars, however, and needs to be thoroughly stirred before each use.

Paper:

Unprinted newspaper is usually used, although bogus and other cheap papers are possible. Sheets should be approximately 18 X 24, large enough for free muscle action. The back of old wallpaper can also be used and is excellent for murals in which each child works on his own section of the group picture.

Easel:

An easel can be bought or constructed at home. It should be adjusted to the height of the child. If an easel is not available, painting can be done on a table top or floor. In this case, a muffin tin makes an excellent paint container.

Brushes:

Brush should have large head, making strokes $\frac{3}{4}$ to 1 inch wide, and handle big enough for child to grasp it easily, but not too long. (Handles can be cut to shorten.) These can be bought at art or school supply shops and at paint stores.

Crayon Drawing

Crayons:

Should be large size -- $\frac{1}{2}$ inch in diameter for young children -- somewhat smaller for the five year old. They should be in fairly good condition -- boxes of numbers of short, broken crayon ends don't encourage use.

Paper:

Large sheets, 12 X 18 or more, of manila or bogus paper are more satisfactory than small sheets. Plain paper gets the nod over "color books" every time.

Colored chalks:

Colored chalks can also be used if large sizes are obtainable. They rub off easily, so the child's clothing must be protected. The use of fixative gives a permanent product when desired.

Modeling Clay and Dough

Clay:

Clay, like dough, is fun for poking, patting, and rolling. However, since it is the material of the artist, it leads the child to more creative activities than dough. Sometimes he may name what he makes, many times not. He should get recognition for making something new and different, rather than copying an adult's "cute snowman."

Clay may come from a river bank, or may be purchased in powdered or moist form. Its unique feature is that it will harden. (Plasticene which has an oil base and will not harden is usually not as popular with children.)

To prepare clay from clay powder (purchased in five-pound boxes):

Method #1: Knead water into powder with hands, using only enough water to moisten. Mold into balls and leave exposed to air until pliable but not too sticky.

Method #2: Place powder in cloth sack. Tie firmly. Place in pail, covering with water. Remove clay next day and mold into balls.

A plaster of Paris plaque or urn is useful on which to mold clay into balls. Excess water is absorbed and clay may then be used at once.

Storage: Keep clay balls covered with damp cloth in closed container, an earthen jar being best. Place a thumb hold in each ball and fill with water to insure moisture throughout.

Modeling board: This can be made from masonite or plywood. An enamel-topped table or one covered with oilcloth or linoleum also provides an excellent working surface.

Modeling tools: Children seem most creative when given clay and their own two hands. Dramatic baking play flourishes when children have cookie cutters, tongue depressors, spikes. It is unfortunate when too much of the latter cuts down on the free creative expression which children show without tools.

Painting clay objects: When hard, they may be painted with enamel paints, or with powder paints followed by a coat of shellac.

Variation - for the brave mother or teacher: If table, floor, and clothing are well protected, children occasionally like very wet clay to smear.

Dough:

#1. Cooked dough

1 cup flour

1/2 cup cornstarch - blend with cold water

4 cups boiling water, add 1 cup of salt

Method: Pour hot mixture into cold. Put over hot water and cook until clear. Cool overnight. Knead flour in until right consistency, adding color with flour. Keep in damp cloth or airtight jar. Products will harden and dry (if dough becomes hard, add more water as needed); can be painted if uncolored dough is used.

#2. Cornstarch dough

- 2 tablespoons cornstarch
- 4 tablespoons salt
- 4 tablespoons boiling water

Method: Mix cornstarch and salt. Add color if desired. Pour on boiling water, stir until soft and smooth. Place over fire until it forms soft ball. If material crumbles, add a little boiling water. In using, if it sticks to fingers, dust hands with cornstarch. Keep plastic by wrapping in wax paper. Hardens in air, so products can be kept.

#3. Uncooked dough

- 3 cups flour
- 1 cup salt

Water until right consistency

Method: For best results add coloring with flour and salt, before adding water. Keep in airtight container. A tablespoon of powdered alum may be added if available, to increase volume.

Vegetable or food coloring or Easter egg dye may be used in the above recipes as well as powder paint or liquid poster paint.

Dough should not be used as a substitute for clay but as an additional material. It provides sensory and manipulative experience and is good accessory material in dramatic house play, but is not as creatively stimulating as clay.

Finger Painting

Finger paint:

Finger paint can be bought or made according to one of the following recipes:

#1. Starch and soap flake finger paint

- 1/2 cup limit starch
- 1 1/2 cups boiling water
- 1/2 cup soap flakes (not soap powder)
- 1 tablespoon glycerine (optional - makes it smoother)
- Coloring (food)

Method: Mix starch with enough cold water to make smooth paste. Add boiling water and cook until glossy. Stir in soap flakes while mixture is warm. When cool, add glycerine and coloring (powder paint, poster paint, or vegetable coloring). Mixture can be kept for a week if placed in a jar with a tight lid.

#2. Cornstarch finger paint

8 parts water

1 part cornstarch

Coloring

Method: Bring water to boil (colored slightly darker than desired paint). Dissolve cornstarch and stir two together. Bring water to boil again. Cooled paint will be slightly thicker.

#3. Wallpaper paste finger paint

Coloring

3 parts water

1 part paste flour

Method: Stir flour into water, add coloring. (Wallpaper paste can be bought at low cost in wallpaper stores or department stores.) Some children enjoy the different touch sensation when 1 and 1/2 cups of salt is added to any of these three recipes.

For young children, the homemade paint is much less expensive and just as satisfactory. For older children, the greater brilliance of color of the commercial product and its lesser tendency to flake off the paper when dry, may make use of the commercial paint more satisfying.

Paper:

Can use Shaw finger painting paper, butcher paper, or any other paper with a high glaze, such as a washable shelf paper. Paper should be completely wet when used, and smoothed out on a table top. The hands should be wet before hand, then redampened as often as necessary.

If no paper is available, a piece of oil cloth stretched over a table top and securely fastened makes a satisfactory surface, although the "picture" cannot be preserved. When a painting has dried, it can be pressed on the wrong side and hung or mounted. Shellacking it in addition helps to keep the paint from flaking off.

Other Suggestions:

Sand:

When children use sand, dampen the sand for cooking, molding, carrying in trucks, "play" cement. Wet sand is more satisfying to children.

Flour and salt finger paint:

1 cup flour
1 and 1/2 cups water
3/4 cups water
Coloring

This has a grainy quality unlike the other finger paints. It provides a different sensory experience.

Dry Powder Painting:

Painting with dry powder paints gives soft interesting results. Put the dry powder paints in pans at the easel and use wads of cotton.

Painting on Different Materials:

Cloth, paper towels, smooth paper, white paper, colored paper, printed and unprinted newsprint, wood, clay, etc.

Paste and different materials:

Let the children use a variety of materials for cutting and pasting; cloth, string, yarn, paper, cotton, leaves, stamps, wire, etc.

A Bon Ami and water paste or glass wax on windows gives another surface for drawing pictures, or use easel painting with brush to paint design on windows.

Prepared by the staff of the
Cornell University Nursery School
Used by Beth Bigej
Vocational Home and Family Life Teacher's Conference 1965

Finger Plays

Ball for Baby:

Here is a ball for baby,
Big and soft and round.
Here is baby's hammer,
See how he can pound.

Here are baby's soldiers,
Standing in a row.
Here is baby's music,
Clapping, clapping so.

Here is baby's trumpet,
To-to-to-to-toot.
Here's the way that baby
Plays the Peek-a-boo.

Here's the big umbrella
To keep the baby dry.
Here is baby's cradle,
Rock-a-baby-bye.

(Use fingers.) Children love
to have names substituted for
"baby."

Turkey Gobbler:

When turkey gobbler's walking out
What do you think he talks about?
Gobble, gobble, gobble.
It doesn't matter what you say
He'll answer in the same queer way,
"Gobble, gobble, gobble."

Chickadees:

Five little chickadees sitting at the door,
One flew away and then there were four.

Chorus:

Chickadee, chickadee, happy and gay,
Chickadee, chickadee, fly away.

Four little chickadees sitting on a tree,
One flew away and then there were three.

Chorus:

Three little chickadees looking at you,
One flew away and then there were two.

Chorus:

Two little chickadees sitting in the sun,
One flew away and then there was one.

Chorus:

One little chickadee left all alone,
He flew away and then there was none.

(Hold fingers up and hide as counted off)

Five Little Froggies:

(Start with little finger)
This little froggie broke his toe.
This little froggie said - "oh, oh, oh!"
This little froggie laughed and was glad.
This little froggie cried and was sad.
This little froggie did what he should.
He ran for the doctor as fast as he could.

Finger Family:

(Hold up thumb)
This is the father
Who brings us our bread.
(Index finger)
This is the mother
Who puts us to bed.
(Middle finger)
This is the brother
Who plays with his ball.
(Fourth finger)
This is the sister
Who cuddles her doll.
(Little finger)
And this is the baby,
The last one of all.

Halloween:

Five little jack-o-lanterns sitting
on a gate,
The first one said, "My, it's
getting late."
The second one said, "There are
witches in the air."
The third one said, "But we
don't care."
The fourth one said, "Let's run,
let's run."
The fifth one said, "It's Halloween
fun."
Wooooooooooooooooo! went the wind,
(Count off fingers, then sweep arms.)
And out went the lights,
Those five little jack-o-lanterns ran
fast out of sight!
(Fingers "run" behind back.)

Squirrels:

(Hold up five fingers)
Five little squirrels
Playing in a tree.
The first one said,
"What's this I see?"
The second one said.
"I smell a gun."
The third one said.
"Let's run, let's run."
The fourth one said,
"Let's sit in the shade."
The fifth one said,
"I'm not afraid."
(Clap hands together)
Bang went the gun!
Away they all run.
(Fingers "run" behind
back)
Every single one!

Birthday Wish:

Hold up a candle and wish a good wish,
(Hold forefinger up)
Wish-one, two, three, - blow!
-----is four years old today,
Wish him the best that you know.

Dicky Birds:

Two little dicky birds sitting on a wall,
One named Peter, one named Paul,
Fly away Peter, fly away Paul,
Come back Peter, come back Paul.

Church Bells:

(Back of hands together - fingers interlaced - index fingers up)

Bells high in the steeple
Call to church the people.

(Keep hands in position, reach arms as pulling rope)

Ding, Dong, Ding, Dong,
Ding, Dong bell!

Bee Hive:

(Close fist -- thumb inside)

This is the bee hive
But where are the bees?

They're hidden inside
Where nobody sees.

Soon they'll be coming
Out of the hive.

One, two, three, four, five.

(Raise fingers one at a time)

Zizz----(Bee sound as you move
index finger to
represent bee)

Household Articles Used for Toys

Spools: Used for blowing soap bubbles; can be strung as beads.

Dress up clothes: Old dresses, hats, shoes, pocketbooks.

Cigar boxes and Cheese boxes: Make cars; attach a tin can for an engine; hollow blocks; truck bodies.
Old rolling pin: Saw off slices for wheels for pull-toys.

Tin cans: Collect various sizes to make nesting toy; remove tops carefully and paint.

Clothespins: Paint them; can be used on edge of cans; use to hang drawings on clothesline to dry or display.

Oatmeal boxes: Cradle for small dolls.

Orange crates and apple boxes: Sand and paint; make sinks, cupboards, stoves, tables, storage space.

Pieces of rope: Jumping, pulling things.

Old pots and pans: Playhouse utensils.

Old socks: For dolls.

Pieces of cloth: To make hats, masks, costumes for dramatic play.

Wrapping paper and bags: To put things in; to make hats, masks.

Things to string: Macaroni; dried seeds such as corn, peas, winged maple seeds, melon, squash, and pumpkin seeds; sea shells; popcorn; flowers; buttons; spools.

Scissors, paper, and paste: Paper chains; pin wheels, snow flakes, trace leaves on paper and cut out.

-- Students can gather the above materials to use in
making play materials for playschools. --
